ABOUT US

- 071 Company profile
- 073 Partner

Industrial integrated production

3000 ton press machine

Higher than industry standard, it produce SMC products with high density and strength, durable quality.

AMADA machine

A production line of VCM, with international top CNC machine, bending machine, laser cutting machine etc., which achieve production tasks in high efficiency and high quality way!

Robot manipulation

Firstly realize mechanized operation, improve work efficiency and reduce human error.

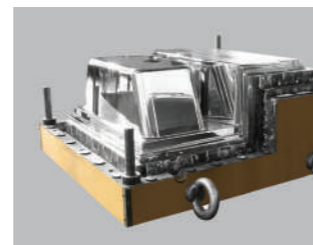

Germany brand HOMAG machine

Wood production line adopt CNC technology and information management, and load electronic dog, which dock computer and production equipment seamless, and make production rate 100% accurate!

Mature plating mould

Do ultimate research on mould structure, texture, plating, temperature etc., break through technology bottleneck, fill the gaps in the domestic mold technology.

SMC

SMC short for Sheet Molding Compound is a composite material---unsaturated polyester glass fiber reinforced sheet molding compound, which is one-step molded with a high temperature.

1. Without any harmful gases such as formaldehyde, without any radiation pollution of ceramic tile. Environmental friendly, and can be implemented "install and play".

2.Product contamination resistance test, recovery rate is up to 90%

3.SMC material, with closely molecular structure, and without micro holes on the surface, resists the dirt. Corner design makes it omni-directional sanitary and clean without any dead angle.

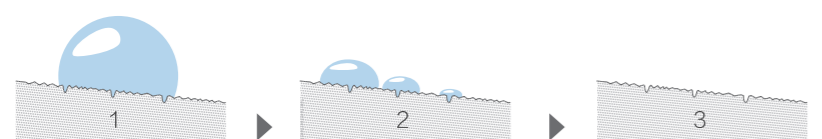

4.Unlike the cold and hard ceramic tile, SMC not only felt gentle but also preventing slippery, more over it has functions to massage the feet and of anti knocking.

SMC floor

Water flow schematic of waterproof floor

COZY' s SMC waterproof floor has good hydraulic conductivity, it increase contact surface with water drop. When water is flowing, water residual is samll. COZY floor structure has 10% of water slope, which make water flowing faster.

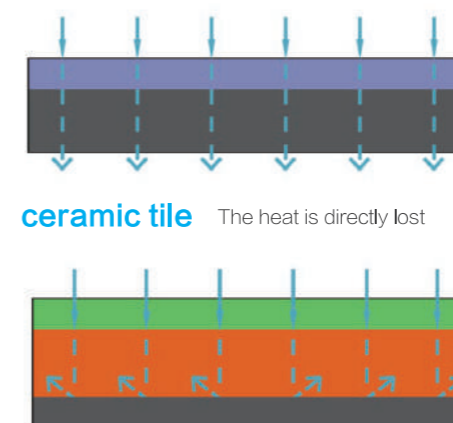

1 Water stack on the surface
 2 5 minutes later, water flow over
 3 2 hours later, the surface of waterproof floor will be dry and clean

<p>Waterproof floor is press molding at one time, with unique turn-ups water lock design, no leakage, eradicate the ills of traditional bathroom leakages.</p>	<p>Circular-arc corner desing, with no dead angle, is sanitary and clean.</p>	<p>With unique surface technology, it can better prevent heat emitted, keep bathroom very warm.</p>	<p>Unique wearproof surface, with molecular structure, make bathroom lasting new.</p>

warm feeling from SMC floor

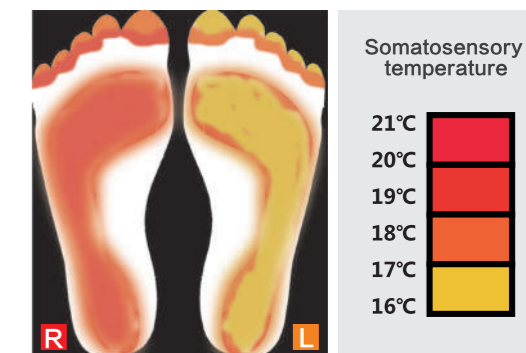

Compare with traditional cold tile floor, high-quality SMC material is warm, and can be tread on the ground with barefoot even in winter.

ceramic tile The heat is directly lost

SMC With unique surface technology, it can better prevent heat emitted, keep bathroom very warm.

Somatosensory temperature test results after standing 15 seconds

R Standing on SMC material

L Standing on ceramic tile

Whirlpool drain

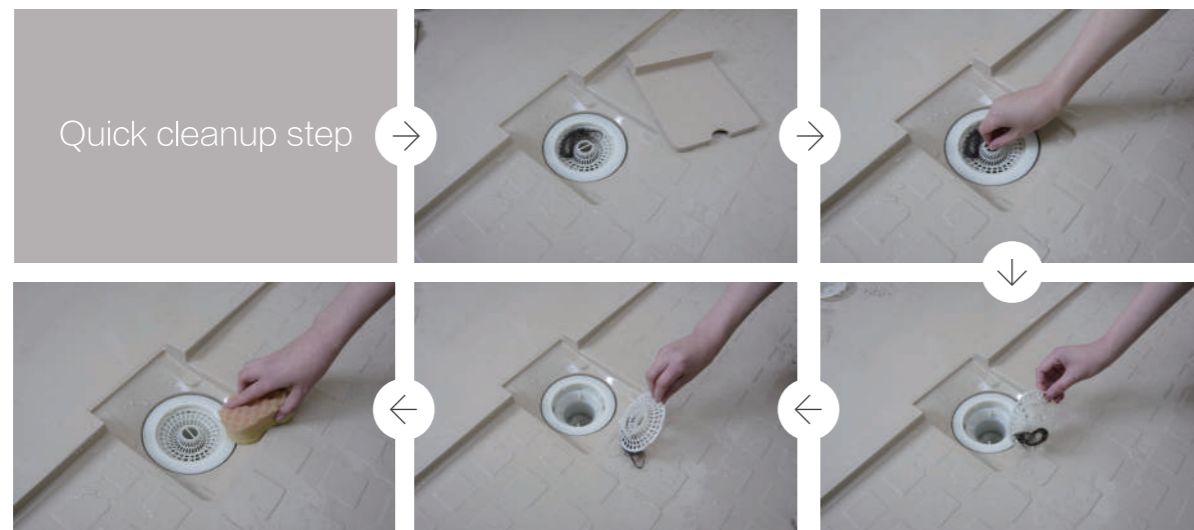

Odor-resistant
After thousands of rigid test
Eliminated pungent odor
Give you a fresh and healthy space

With a 50~70 mm drain water seal, it prevent sewer Odor-resistant

Three layer filters can avoid hair clogging and it's easy to clean.

Our drain has international leading technology, with anti blocking function, floor drain rate is higher than the national standard, and is more scientific.

Quick cleanup step

Base Colour

Installation process

- Architecture point
- Water supply and drain away point
- Heating and ventilate point
- Electric appliance point
- Construction point

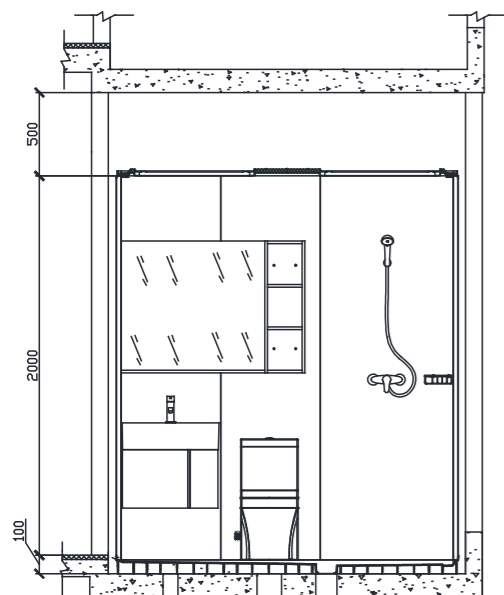

Key point of designing and construction

Installation plan

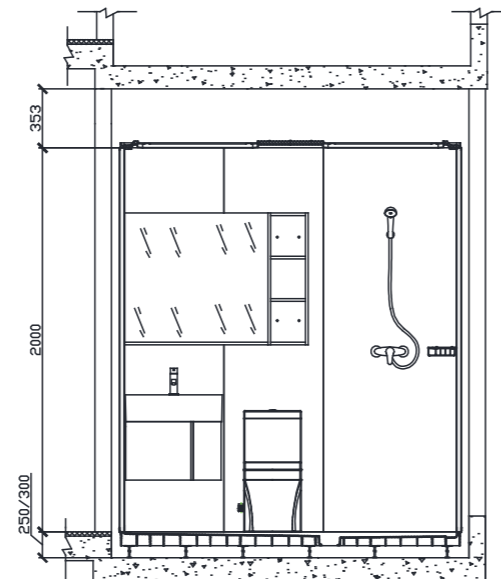

Min installation size: is equal to internal size clear length/width + 100/150mm (there's a little difference between different model) .

Installation elevation

Vertical drain style:
 $H \geq h(\text{wall board height}) + 600\text{mm}(\text{ceiling, appliance \& watersupply pipe height and base panel height})$

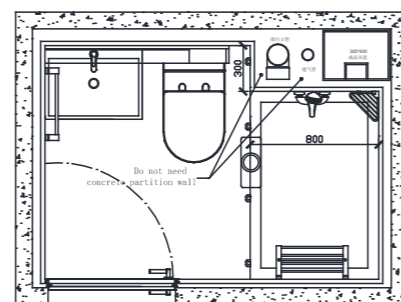

Horizontal drain style:
 $H \geq h(\text{wall board height}) + 600\text{mm}/650\text{mm}(\text{ceiling, appliance \& watersupply pipe height and base panel height} + 250/300\text{mm})$

Piping shaft plan

For most of COZY bathroom units, we can set pipes such as air pipe, waste water pipe, ventilation pipe, water supply pipe into the pipe shaft. The common size of COZY bathroom units pipe shaft is 300mm*800mm, 200mm*600mm.

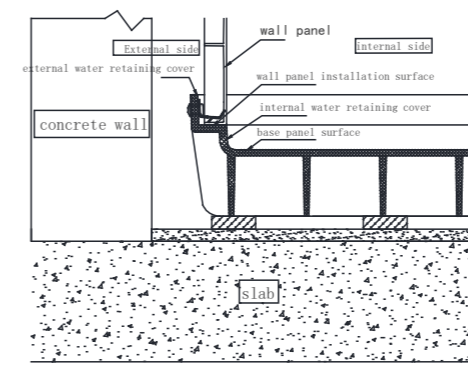

Whether COZY bathroom unit models have pipe shaft is depend on the structure of base panel. Different model is different from one another. You can consult COZY for the details.

When pipe shaft is in the internal size of bathroom, we can move the non-structural wall of the shaft and apply the bathroom unit wall board as partition wall for it. It's space & costing saving.

Key point of designing and construction

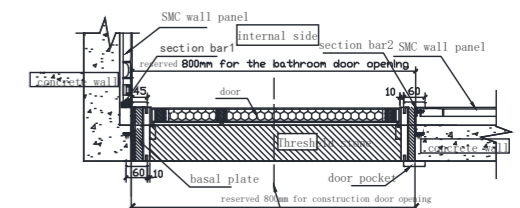

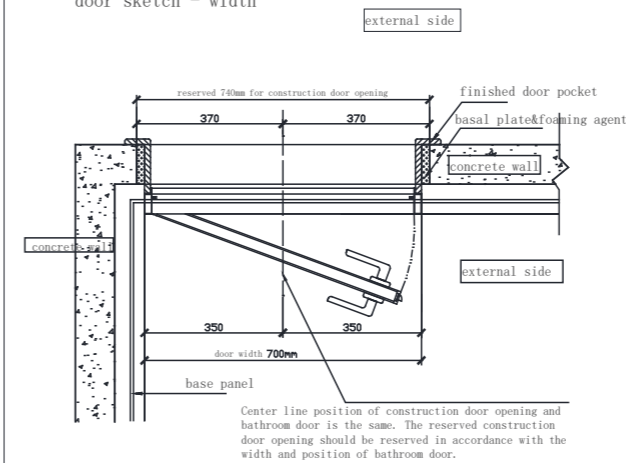

waterproof sketch

■ The bathroom base panel is made of SMC, a high density and strength material. It can reduce leakage, because of the panel & water retaining cover is mould by one step with high temperature and pressure.

■ For the construction installation surface, there's no need for waterproofing work. But leveling work should be applied, with flatness error less than 5mm.

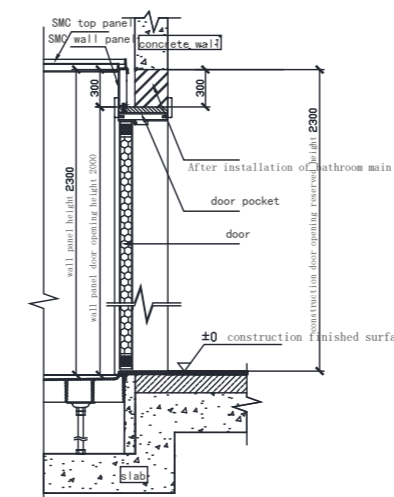

door sketch - width

external side
 Center line position and width of construction door opening and bathroom door are the same. The reserved construction door opening should be reserved in accordance with the width and position of bathroom door. COZY provides fixed frame parts, and door pocket, door panel, threshold stone provided by client.

- Construction door opening should be positioned in line with bathroom plan. Center line position of construction door opening and bathroom door is the same.
- When applied COZY bathroom door pocket, reserved width of construction door opening = door pocket width + 40mm
- When client provides door pocket themselves, reserved width of construction door opening = door pocket width.

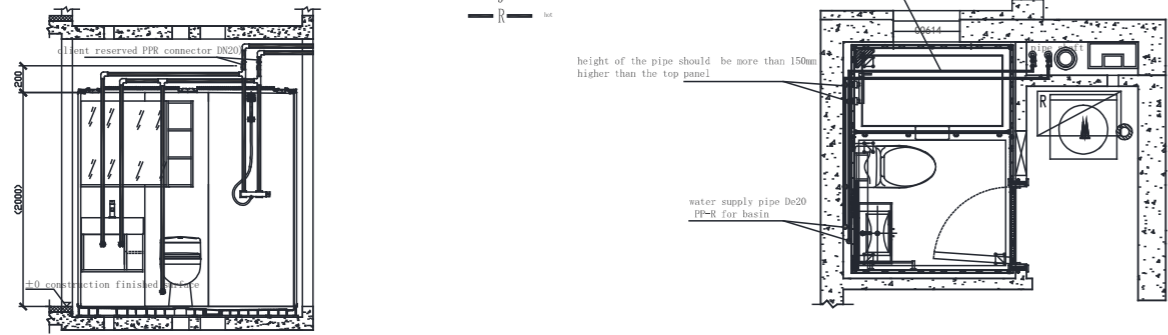

Door sketch - height

- For the bathroom installation requirement, reserved construction door opening height should be taller than bathroom wall panel height.
- Base level of construction reserved door opening height begins from ± 0 construction finished surface
- After installation of bathroom main parts, if the door pocket height is lower than bathroom wall panel, left space around construction opening door should be filled.
- COZY only provides bathroom main parts & accessories, and door pocket, threshold stone provided by client.

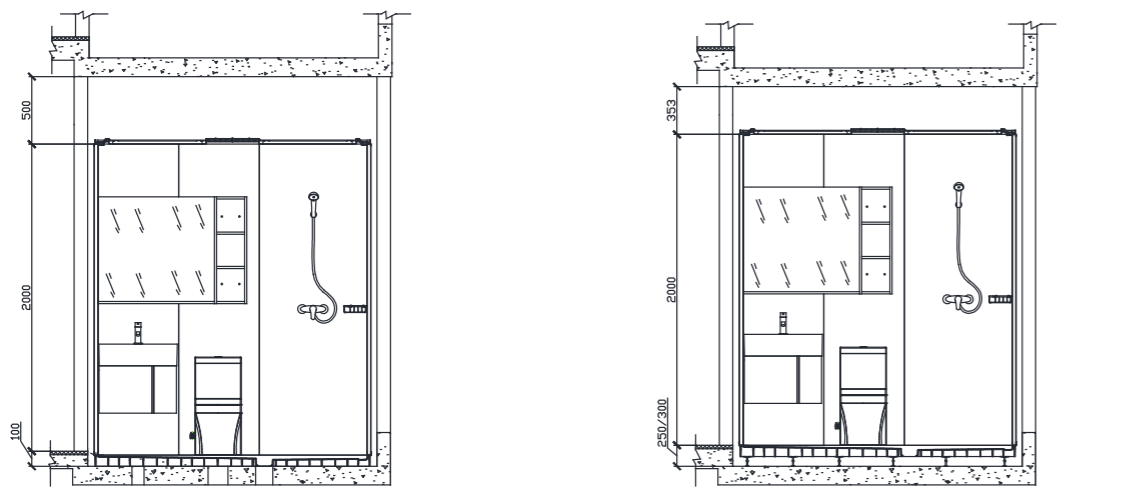

Key point of designing and construction

water supply pipe sketch

- The position of connectors reserved for bathroom unit water supply pipes(hot&cold) should be above bathroom top panel and install closely to the wall panel. Water supply pipes(hot&cold) should not be installed under the bathroom unit base panel.
- the position of connectors reserved for bathroom unit water supply pipes(hot&cold) can be adjusted to any sides(N,S,E,W) of concrete wall. It is better to make it adjacent to the space above basin/shower faucet.
- The height of connectors reserved by client for bathroom unit water supply pipes(hot&cold) can be calculate as following:
 $H \geq h + 200\text{mm}$
 H: height of connectors reserved
 h: bathroom unit wall panel height

Installation elevation

Vertical drain style:
 $H \geq h(\text{wall board height}) + 600\text{mm}(\text{ceiling, appliance \& watersupply pipe height and base panel height})$

Horizontal drain style:
 $H \geq h(\text{wall board height}) + 600\text{mm}/650\text{mm}(\text{ceiling, appliance \& watersupply pipe height and base panel height} + 250/300\text{mm})$

water & electric pipe system sketch

Remarks:
 1. For vertical drainage, 3 pieces of pvc pipe interface should be reserved: DN110 for toilet, DN75 for drain, DN50, connected by client.
 2. Refer to the above plan for the details.

Remarks:
 1. For horizontal drainage, joint the pipe of basin, drain & toilet together, then reserve an interface of a pieces of pvc pipe DN110, which is more than 300mm beside the edge of base panel.
 2. Refer to the above plan for the details.

Company profile

Since established in 2006, Suzhou Cozy House Equipment Co., Ltd is always devoting itself to development of Chinese housing industry modernization and has more than 300 national patents. Cozy is Awarded "National Housing industrialization Base", "National Assembly Building Industry Base", "National High-tech Enterprise", "intellectual property Management System Certification", "Jiangsu Enterprise Engineering Technology Research Center", "Industrial Design Center". "Enterprise Technology Research and Development Center" and other honorary titles.

COZY services more than 30 countries and areas with assembly building interior products.

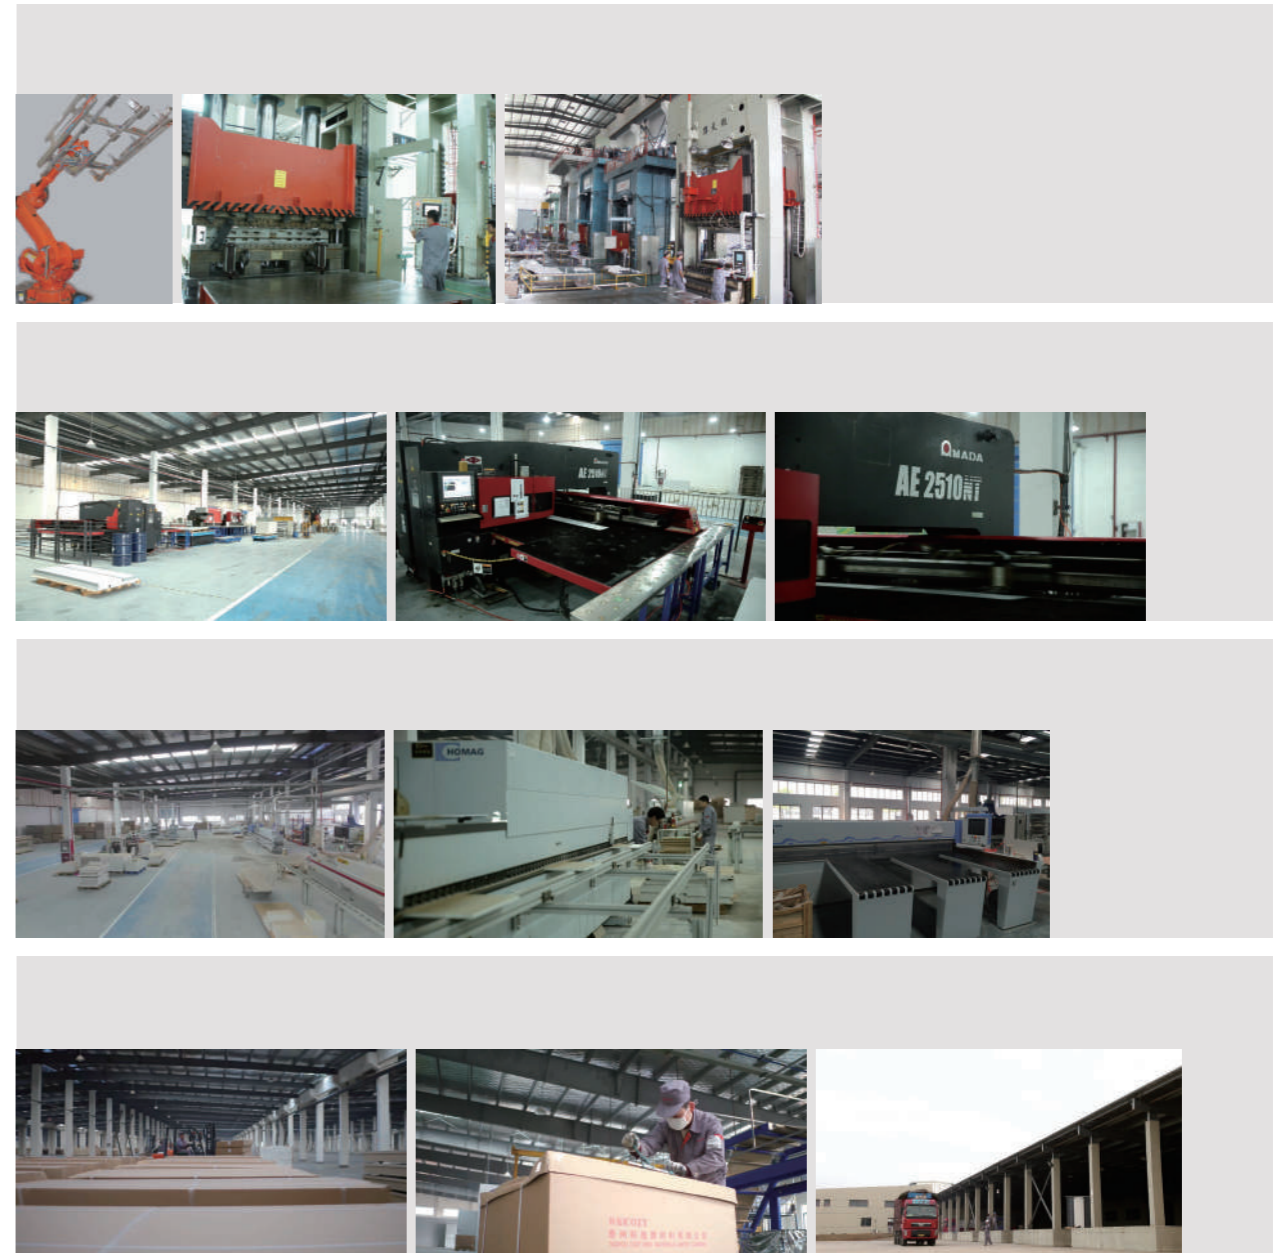

Based on bathroom pods and system kitchen, Cozy has 9 systems with own R&D and production for fine decoration real estate, hotel apartment, medical aged care, tourism industry and outdoor facilities, etc. Cozy always insists on producing products that can help users create value, reduce power and waste. Increase 70% construction efficiency! Reduce 90% construction decoration garbage! Save 30% materials. Improve your living quality and create a better, economic and environmental-friendly society.

Cozy will continue to aim at becoming a leading enterprise in the assembly housing internal products, Combining design, products, construction and technology to create the ecological manufacturing concept of "one R&D center and three cores", setting up a housing products R&D center, factories in Jiangsu, Suzhou, Anhui Wuhu Industrial Park, 4 more production bases are being built in Hebei Hengshui, Hubei Guangshui, Chongqing Rongchang, Guangdong Longchuan. Cozy also owns a Decoration company named Qinco and creates COZY internet technical service platform Uhousing, an App for housing products. Improving prefabricated housing interior industry layout and becoming the facilitator of Chinese housing products.

Production equipment

- SMC production line
- VCM production line
- Wood production line
- Warehousing logistics

Wuhu production base
Wuhu cozy factory went into operation in the end of 2012, The total planning area is 640,000m², and the whole year Prefab Bathroom Unit production capacity is 300 thousand sets.

Suzhou production base
In June 2008, Suzhou COZY factory went into production, and our factory area is 66,667m², the annual Prefab Bathroom Unit production capacity is 100 thousand sets.

Xiangcheng production base
In May 2012, Xiangcheng COZY company went into operation, it designed and produced HOUSETEC type for top five Japanese bathroom manufacturer.

Hubei Guangshui production base
Our factory area is 226,667m², the annual Prefab Bathroom Unit production capacity is 100 thousand sets.

Hebei Hengshui production base
Our factory area is 200,000m², the annual Prefab Bathroom Unit production capacity is 250 thousand sets.

Guangdong Longchuan production base
Our factory area is 118,000m², the annual Prefab Bathroom Unit production capacity is 100 thousand sets.

Chongqing Rongchang production base
Our factory area is 1333,33m².
